11/29/2021

List of functions not working correctly:
- When broadcasting to the whole network, packets will be resent by nodes that didn't originate the packet, so the on_packet_sent listener will trigger, which may be unexpected behavior.
- Prediction isn't properly updating the associated value. I have unit tested the remainder of the prediction module and the tests have been working.
- Some glyphs show up on documentation site, because something is being interpreted incorrectly.
- Validator incorrectly recognizes false packets as a packet with a valid header.
